Status of the Claims

Claims 1-78 have been presented for examination.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-53, drawn to a method of separating particles with a moving optical gradient, classified in class 250, subclass 251.
- II. Claims 54-78, drawn to a device for separating particles with a moving optical pattern, classified in class 359, subclass 450+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case there are many different devices for generating a moving optical gradient for manipulating microparticles. The instant device as claimed does not have to provide an optical gradient with force to manipulate particles, just an optical pattern within a device to separate particles. The device could be used for other methods such as measuring dielectric constant, elasticity or other physical properties.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1651

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
